THE GOLDEN APPLE - MYTH OR MYSTERY?

The apple is the fruit first mentioned in history and it has long held an honored place in household medicine. The saying "An apple a day keeps the doctor away" no doubt has some justification. Moreover, this fruit keeps bobbing up as symbolic of treasure in such expressions as the "apple of his eye"; the "golden apple" and so on. I had always taken for granted that this last referred to the orange, but not so long ago this belief was called into question. So it was necessary to consult the authorities, and it must be confessed that ancient mythology and the works of Homer were included. This is what turned up after a fairly exhaustive search of a number of classical sources.

Just before the Trojan War began, as related by Homer, Eris, who was a sister of the War God Ares, not having been invited to the wedding festival of Peleus and Thetis, flung to the guests a golden apple which was to be given to the most beautiful woman present. The rival beauty queens at the time were Hera, Aphrodite and Athena, and the umpire was Paris who decided in favor of Aphrodite or Venus as she was known to the Romans. This lady has since enjoyed quite a reputation. On account of the ensuing commotion over the choice, the golden apple came to be known thereafter as the "apple of discord." Later the umpire of the beauty contest, aided by the winner, eloped with Helen, the wife of Menelaus, King of Sparta. The Trojan War was on in earnest.

According to Greek mythology, these golden apples were guarded by maidens known as Hesperides, whose parentage seems to be in some doubt, although Bulfinch in his *Mythology* says that Atlas was their father. There were three of them according to some authorities, and from four to seven according to others. Just where was located the island on which the fruit grew is unknown. It may have been West of Greece and there is a hint of Gambia in Africa. One German scholar mentions the Island of Orango in the mouth of the River Geba. Milton and many later poets have sung of the fair garden of the Hesperides and inspired by the glories of Mediterranean sunsets, they visioned the West as a region of brightness and glory. So they sometimes placed the garden in the Isles of the Blest where the bright oxen of Geryon were pastured. Anyhow the golden apple flourished somewhere in the land of the Hesperides on a tree which was under the watchful eye of the dragon Lach. All agree on that.

(Continued on inside back cover)

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is \$5.00 per year in the United States and \$5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at \$1.00 per year. Now the golden apple should have been the fruit which is so widely grown that it is on everyone's table, the fruit that once was shipped in cargoes from the Sandwich Islands to California and is not now to be found on any tree in the Hawaiian Archipelago save by accident. The orange, which as a delicacy for good little boys is celebrated by Stevenson in his Child's Garden of Verse, ought to be as old as the history of the Mediterranean countries. Nevertheless, the authorities say it was first introduced into Europe by way of Syria from India or Indo-China in the 10th Century, and if this be true Homer and the Trojan Greeks couldn't have seen it.

My lament is that there may have been once, a better fruit perhaps than the orange and that our generation missed it. Fortunately, we did miss the pomegranate, which is also celebrated in mythology and whose image, carved in stone, can be seen in the Alhambra. My first and last pomegranate was consumed in Spain and it was eaten only as a tribute to survival from remote antiquity. This fruit is mentioned in the Old Testament and it was under cultivation in Egypt in addition to being found on the tables of the ancient Greeks. One certainly can't make a golden apple out of it.

One writer suggests that instead of a Spanish orange, a lemon may have been the fruit tossed to the gorgeous Aphrodite - no compliment I can assure you. Another mentions the quince, which uncooked, is quite inedible. Getting back to the orange, again suggested by the name of the Island of Orango, somewhere west of Greece, the botanists seem to have proved their point when they say the orange was unknown to the ancient Mediterranean peoples. So the mystery of the Golden Apple is still unsolved.

H.W.J.
